

DETECDATA

WEB BASED DATA COLLECTION AND
MANAGEMENT SOLUTION

DETECDATA IS A **DATA COLLECTION AND MANAGEMENT SOLUTION** FUELLED BY DATA FROM DETELECTRONIC FLOW AND LEVEL MONITORING EQUIPMENT. BUILT ON A WEB PLATFORM, REMOTE ACCESS ENABLES **INTUITIVE** AND EFFECTIVE MANAGEMENT OF WATER NETWORKS.

OVERVIEW

DetecData is a user friendly platform providing users with individual logins and personalised dashboards for instant access to the status and performance of monitored sites. Analysis is presented in both graphical and tabular formats and groups can be created to show the current status of sites within a particular catchment.

SITE VISIBILITY

Google Maps and street view is integrated into Detecdata as standard. Site locations are plotted on the maps and photos of the site and installation can be uploaded to give users full visibility of the site and the network as a whole. Users simply click on the location pin to access details about a particular site.

ALARMS AND SETTINGS

The dashboard provides links to a range of settings which can be modified. Profiles can be created for alarms, thresholds, logging rates and transmission frequency. Site alarms can be programmed to automatically forward to multiple devices by SMS or email.

KEY FEATURES

- Powerful cloud based multi-centre operation
- Data analysis and configuration of sites 'on-the-move'
- Remote configuration and management of Detectronic's MSFM based products
- Fully compatible with all modern web browsers
- Site visibility
- English and German language versions available

GRAPHICAL ANALYSIS

Intuitive graph navigation lets you explore and navigate through massive volumes of data efficiently and with ease. Multiple sites can be viewed on one graph using drag and drop functionality and options are available to totalise data and compare profiles. Whatever you're looking for, you'll find it in DetecData, and if you want to export it to manipulate it further, you can do that too.
